

# ***Saving energy in summer***

**Activity:**

How do you stay cool in the summer? Circle the ones you use

- Fans
- Reverse Cycle Air Conditioning
- Evaporative Air Conditioning
- Swim in the pool
- Lie under the shade of a tree
- Eat an icy-pole

Which way to stay cool do you think uses the most energy?

.....  
.....  
.....  
.....

We don't always have to run the evaporative air conditioner at all times.

In fact running an evaporative air conditioner uses both water (one unit can use around 30L / hour) and energy

Find different ways to cool yourself and your house down when it's hot outside and note them down here:
